

## Arboair | High precision imagery for bark beetle detection

*Precision forestry service that with the help of RGB and multispectral images from drones, airplanes, helicopters or satellites can detect bark beetle infected or stressed trees.*

Today, the technology for identifying bark beetle attacks in the forest is largely based on manual work through visual checks of forest areas, where early attacks are almost impossible to see, while old attacks are easier to detect. Attempts have been made to identify damage attacks using satellite radar maps which give a good indication and can be seen as a complementing part to our precision analysis. Arboair Forest Mapper is a service where you analyze your images via our AI. Our model is trained on over 200 000 trees and it is verified by forest managers.

## MORE DETAILS

---

### CHALLENGE ADDRESSED

1.- Improve forest resilience and adaption to climate change

### DOMAIN

Inventory, monitoring  
Forest disturbances, risks  
Research and development

### TYPE OF SOLUTION

Sensors, measurement equipment

### KEYWORDS

Bark beetle; detection; drones; AI

### DIGITAL SOLUTION

Yes

### INNOVATION

Yes

### COUNTRY OF ORIGIN

Sweden

### SCALE OF APPLICATION

National

### START AND END YEAR

--

## CONTACT DATA

---

### OWNER OR AUTHOR

Paper Province  
Marcus Drugge
