

EXTRAFOR | Exoskeletons for forest works

The Extrafor project aims to reduce the drudgery of logging by creating an exoskeleton adapted to the needs of manual logging.

The mechanization rate for harvesting hardwood stands is only 10% and mechanization in silviculture is very limited. Many operators report musculoskeletal disorders. The use of exoskeletons in the forest would make it possible to assist the operators in their work, it would make their task easier while aiming to preserve their health, without of course compromising their safety. It is a hybrid solution that combines the acuity of manual work with the strength and endurance of a machine, while obviously remaining affordable. Equipping field workers with ergonomic exoskeletons, adapted to work in the forest is an intermediate and complementary solution between mechanisation and manual work, allowing the unblocking of certain difficult situations. Seeking to increase human capacity instead of replacing it is also a way of meeting the various expectations of citizens (maintaining jobs in rural areas, social acceptability of forest sites) and of enhancing the value of work in the forest (and the sector) by promoting this type of initiative.

Más DETALLES

RETO ABORDADO

4. Garantizar una mano de obra bien formada a través de un desarrollo de competencias y una educación atractivos

PALABRAS CLAVE

Exploitation
mechanisation
penibility

PAÍS DE ORIGEN

Francia

DOMINIO

Aprovechamiento, infraestructura, logística

SOLUCIÓN DIGITAL

No

ESCALA DE APLICACIÓN

Nacional

TIPO DE SOLUCIÓN

Maquinaria y equipos inteligentes

INNOVACIÓN

Si

AÑO DE INICIO Y FIN

2017 - 2020
