

# Drones in Forestry Planning

Metsä Group photographed in 2018 with drone about 3 500 hectares of forest in southern and western Finland and utilized the data as basis for forest plans for forest owners. According to experience, the method has been developed and now the drone forest plans are being sold as an alternative to traditional forest plans. The forest plan based on information described by Drone or copter with camera challenges the traditional forest planning. The method is used in particular to get more accurate tree information.

The drone plan will be of interest to the forest owners who want to be in the front and develop new developments with forest industry. For example, in a virtual forest, the data measured in the drone will create a precise tree map, where the trees are in the right places and the tree species are correct. In virtual reality, it will better reflect the fluctuations of the wood inside the forest compartment than the traditional forest plan information. The drone design and virtual forests form an interesting pair in the future by producing new experiences for forest owners.

The measurements will provide both the amount of trees in cubic meters and the value of the wood in euros more accurately than before. With drone surveys we also get information about the amount of dead wood – it helps to preserve the important structure of forest for diversity.

The method is capable of identifying tree three species: pine, spruce and birch. The remaining deciduous tree species are logged into the category of other deciduous trees. Based on the measurement data, treatment recommendations are calculated. This drone-made plan differs from the traditional, where human being makes the treatment recommendations.

The forest plan produced by drone is particularly suitable for updating the forest plan that is about to expire. It is also suitable for forest owners, who are particularly interested in the amount and value of the timber.

The forest plan of the drone also benefits from a faster delivery of traditional forest plan. Delivery time is few months, which is only half of the delivery times of traditional forest plan.

## DETALLES

---

### ORIGEN DE LA MADERA

Bosque

### TIPO DE MADERA

Madera en rollo

### TIPO DE MADERA AFECTADA

Stemwood, energy wood

### IMPACTO EN EL MEDIO AMBIENTE Y LA BIODIVERSIDAD

Positive

### EFFECTO SOBRE LOS INGRESOS

Positive

### POTENCIAL DE EXPLOTACIÓN

--

### HUB

Eje Norte

### IMPACTO ECONÓMICO

Positive

### CONOCIMIENTOS ESPECÍFICOS NECESARIOS

IT skills, knowledge of forest planning processes

### POTENCIAL DE MOVILIZACIÓN

Medium

### POTENCIAL DE SOSTENIBILIDAD - VALOR

--

### FACILIDAD DE APLICACIÓN

Easy, requires IT skills

### FACILIDAD DE IMPLEMENTACIÓN - EVALUACIÓN

--

### PREREQUISITOS CLAVE

IT skills needed, co-operation needed between IT companies and forest companies

### TIPO DE EVENTO EN EL QUE SE HA PRESENTADO ESTA IFS

--

### EFFECTO SOBRE EL EMPLEO

Positive

### COSTES DE IMPLEMENTACIÓN (EURO - €)

--

## MÁS DETALLES

---

### RETO ABORDADO

5. Mejorar el rendimiento económico y medioambiental de las cadenas de suministro forestal

### PALABRAS CLAVE

--

### PAÍS DE ORIGEN

Finlandia

### DOMINIO

Gestión forestal, silvicultura, servicios ecosistémicos, resiliencia

### SOLUCIÓN DIGITAL

No

### ESCALA DE APLICACIÓN

Nacional

### TIPO DE SOLUCIÓN

Herramientas de asesoramiento y servicios para propietarios forestales

### INNOVACIÓN

Si

### AÑO DE INICIO Y FIN

2017 -

## DATOS DE CONTACTO
