SAFERS | Structured Approaches for Forest Fire Emergencies in Resilient Societies

SAFERS mission is to support societies becoming more resilient across the key phases of the forests fires emergency management cycle

The project is going to create an open and integrated platform featuring a forest fire Decision Support System. The platform will use information from different sources: earth observations from Copernicus and GEOSS, fire sensors in forests, topographic data, weather forecasts and even crowdsourced data from social media and other apps that can be used by citizens and first responders to provide situational in-field information.

PLUS DE DéTAILS

DéFI CONCERNé

1. Améliorer la résilience de la forêt et son adaptation au changement climatique

DOMAINE

Perturbations forestières, risque, réponse aux calamités

TYPE DE SOLUTION

Outils de traçabilité

MOTS-CLéS

Risk maps

preparedness actions

early detection
