

## Development of visual and mechanical sorting tools for the enhancement of structural sawn timber

Structural sawn timber intended for construction must offer similar guarantees to those offered by other materials and products intended for the structural construction sector. For this purpose, it is necessary to develop classification tools that allow manufacturers and marketers to certify the strength and stiffness values of all the wood that is placed on the market (adjusted to the species and origin that corresponds).

It is, in addition to being a legal obligation, a tool for the valuation of wood that is enabling a competitive improvement of its industrial network.

Technological development of structural sawn timber not only enables it to be directly promoted in the construction sector as a construction element, but also to be incorporated into the manufacture of technological products with high added value, such as glued laminated timber, duos, trios, CLT, prefabricated panels... These are high value-added products that require high levels of competitiveness that cannot be achieved without their main raw material, structural sawn timber, increasing its competitiveness, optimising its manufacturing times and its declared mechanical properties

Visual classification tools have been developed for the main commercial wood species found in Spanish forest stands, such as *Pinus sylvestris*, *Pinus insignis*, *Pinus nigra*, *Pinus pinaster*, *Abies alba*, *Pseudotsuga menziesii*, *Quercus rubra*, *Castanea sativa* and *Eucalyptus globulus*. Tools that in many cases enable the possibility of classifying structural sawn timber into three structural qualities, which allows the different qualities of wood that the timber industry places on the construction market to be classified and valued.

Mechanical classification systems are currently being developed for the main species of the *Pinus* genus. This is one more step in the competitive improvement of this type of wood, as it improves the classification times and the classifying performance in the different mechanical qualities.

Both developments have enhanced the value of the wood of the different wood species characterized, and have promoted its use in construction.

## DETALJER

---

### OPPRINNELSE FOR TRE

Industri

### TYPE TRE

Tre fra rundtvirke

### TYPE TRE INVOLVERT

Pinus sylvestris, Pinus nigra, Pinus radiata, Pinus pinaster, Pseudotsuga menziessii, Larix sp, Quercus rubra, Abies alba

### PÅVIRKNING PÅ MILJØ OG BIOLOGISK MANGFOLD

Positive, it mobilizes wood with a proper forest management

### INNTÆKTSEFFEKT

Positive, more quality timber is mobilized

### UTNYTTELSESPOTENSIAL

--

### HUB

--

### ØKONOMISK PÅVIRKNING

Structural timber value increases in 10€/m3 approximately

### SPESIFIKKE KUNNSKAPSBEHOV

Knowledge about Physical-mechanical properties of wood. Harmonized rules

### MOBILISERINGSPOTENSIAL

300,000 m3

### BÆREKRAFTPOTENSIAL - VERDI

--

### ENKEL IMPLEMENTERING

Very easy

### ENKEL IMPLEMENTERING - EVALUERING

--

### VIKTIGE FORUTSETNINGER

Experience on manufacturing and classification of structural timber

### TYPE BEGIVENHET DER DENNE BPI HAR BLITT OMTALT

--

### EFFEKT PÅ ARBEIDSPLASSER

Positive through better competitiveness

### KOSTNADER MED IMPLEMENTERING (EURO - €)

--

needed

## MER INFORMASJON

---

### UTFORDRING ADRESSERT

--

### DOMENE

Skogindustri, bio/sirkulær økonomi

Industri for bygg i tre

### TYPE LØSNING

--

### NØKKEWORD

--

### DIGITAL LØSNING

Nei

### INNOVASJON

Nei

### OPPRINELSESLAND

Spania

### POTENSIALE

Nasjonal

### START OG SLUTT ÅR

2011 -
