

Arboair | High precision imagery for bark beetle detection

Precision forestry service that with the help of RGB and multispectral images from drones, airplanes, helicopters or satellites can detect bark beetle infected or stressed trees.

Today, the technology for identifying bark beetle attacks in the forest is largely based on manual work through visual checks of forest areas, where early attacks are almost impossible to see, while old attacks are easier to detect. Attempts have been made to identify damage attacks using satellite radar maps which give a good indication and can be seen as a complementing part to our precision analysis. Arboair Forest Mapper is a service where you analyze your images via our AI. Our model is trained on over 200 000 trees and it is verified by forest managers.

VIAC INFORMÁCIÍ

RIEŠENÁ VÝZVA

1. Zlepšenie odolnosti lesov a adaptácie na zmenu klímy

DOMAIN

Inventarizácia, posudzovanie,
monitoring/monitorovanie
Disturbancie/kalamity, riziká, odpoveď na katastrofu
Výskum a vývoj

TYP RIEŠENIA

Senzory, meracie prístroje/meracie vybavenie

Kľúčové SLOVÁ

Bark beetle; detection; drones; AI

DIGITALNE RIEŠENIE

áno

INOVÁCIE

Áno

KRAJINA PôVODU

Švédsko
