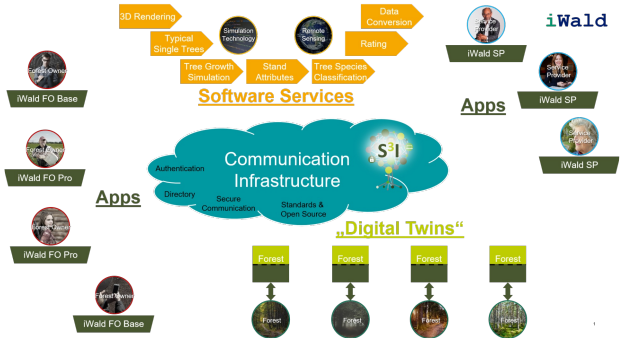
iWald | Forest growth simulation app



Comparison of silvicultural treatment concepts by simulating forest growth processes on the smartphone.

In the iWald project, a system is being developed enabling forest owners to obtain realistic and technically sound options for the sustainable management of their forests. The individual objectives of the forest owner (private, communal, state) are taken into account as well as the forestry risk minimization and the sustainable conversion of forests while safeguarding the economic, ecological and social forest functions. One of the main results of iWald will be the "iWald App", which can be used to simulate forest growth processes on a smartphone. This will be provided with different entry barriers, so that both the forest layman and the trained forester will find their access to iWald. The goals include activating forest owners, who can thus approach their forest on a playful level, or improving public acceptance of forestry interventions through the possibility of simple visualization of future consequences.

PODROBNOSTI

IZVOR LESA
--

TIP LESA
--

VRSTA OBRAVNAVANEGA LESA
--

VPLIV NA OKOLJE IN BIODIVERZITETO
Economic, ecological and social forest functions are integrated into the apps decision support system.

VPLIV NA PRIHODKE
--

POTENCIAL IZKORIŠČANJA
--

VOZLIŠČE
Srednje-zahodno vozlišče

GOSPODARSKI VPLIV
--

POTREBNO SPECIFIČNO ZNANJE

POTENCIAL ZA MOBILIZACIJO
High, activation of forest owners to initiate forestry interventions is encouraged by the game character of the app.

TRAJNOST - VREDNOST
Zelo pozitivno

ENOSTAVNOST IZVEDBE
The solution is not yet available on the market.

ENOSTAVNOST IZVEDBE - OCENJEVANJE
Težavno
