Skogskolen | Online school of forestry

E-learning platform for multiple levels of foresters/forest owners developed in collaboration between various forest organisations.

The online School of Forestry has been established in collaboration between the Norwegian Forest owners' associations, the State Forest, and the Forestry Extension Institute. The aim is to jointly develop the course content to increase the level of forestry expertise in all stages of forestry. The courses are open for everyone, although the target group are the organisations' employees. The system allows each organisation to make individual additions and adaptations to the courses. Several courses will be presented on the platform, mainly in the topics of silviculture, planting and soil preparation. The course content may be used by all organisations, with their own individual additions and adaptations.
