Castilla y León forest resources mobilization programme

The forestry activity in Castilla y León is one of the most important in the forest Spanish context in terms of size and balance between the different agents and aspects of the value chain, in terms of productive area, production and productive potential, and variety and type of products. The globalization and duration of the economic crisis, affected the decrease of resources, this raised business difficulties and changes in the current management model. The programme was proposed as an instrument to stimulate economic activity and the development of the forest management.

In progress

The first objective is to increase the value of sustainable production, the productivity of the forests and the sector in the region. This would improve the main economic and employment parameters linked to the regional forestry sector. The programme development has allowed increasing the market of wood in Castilla y León.

DETALJER

VEDENS URSPRUNG

Skog

TRäTYP

Rundvirke

TYP AV TRä

Stemwood. Above and below ground woody biomass (ex. shrubs, wood for fibres, wood for energy)
