Flurbereinigung/Flurneuordnung

· A land-consolidation procedure aimed at reorganizing land, including forestland. During the restructuring process, mostly smaller scattered areas (fragmented land) are combined to larger and thus more effective usable areas. The reason for the previous fragmentation is the „real division“. Landscaping also includes the creation of paths, roads and waters as well as similar public facilities.

The main goals of this process are:

Better and more efficient cultivation

Maximum possible benefit for all stakeholders and public

Increase in value

Improving land occupancy
